

WOOD HOGS

A Rotary Disc Screen ahead of your hog separates acceptable sized combustible material from the oversized material. The hog then works only on oversize material, reducing its energy requirements and increasing its capacity

Rawlings disc screens are an efficient and cost-effective choice for high volume primary screening applications. From hog fuel to woodchips, bark to board finish, urban wood to recyclable materials, Rawlings disc screens deliver performance and reliability, low maintenance operations in the most demanding conditions

ALWAYS INNOVATION, NOT IMITATION
